

POLYP TRAP WITH LED LIGHT OPTION

New Polyp Trap with unique features

Our latest development is an unique Polyp Trap or specimen collector with new features. With the easy pass-through system you will be able to have suction at all times. Once a polyp is caught, the magnifying glass enables you to check with ease if the polyp is safely retrieved. With our distinctive accessory, the led light, you will be able to have a better visual sight of the polyp in the procedure room.

About us

Endoss manufactures medical devices with a focus on flexible endoscopy and CSSD departments. Patient safety, infection prevention and more efficiency for the enduser is our aim. Our products and services have been finding their way to Dutch hospitals since 2010. In Germany and Sweden we provide customers with our products and services via our subsidiaries Endoss GmbH and Endoss Scandinavia AB. A worldwide network of distributors sells our products to their customers.

Endoss continuously innovates with smart product design and associated packaging. When designing our products, we work closely with the end users to bring user-friendly products to the market.
