

RELIABLE | COMMITTED | PROFESSIONAL | INDEPENDENT

**VALIDOSS**

**PARTNER IN VALIDATION**

**About Validoss**

Endoss started validating in the Netherlands in 2010. In order to further specialize and distinguish our services, it was decided the validation services will continue under the name Validoss from 2020. Validoss is specialized in the validation of equipment for cleaning, disinfection, drying, sterilization, transport and storage.

Our team of specialists represent a combined experience of more than 50 years. In numerous Belgian, German, Dutch, Scandinavian and Swiss hospitals and clinics we have been performing validations.

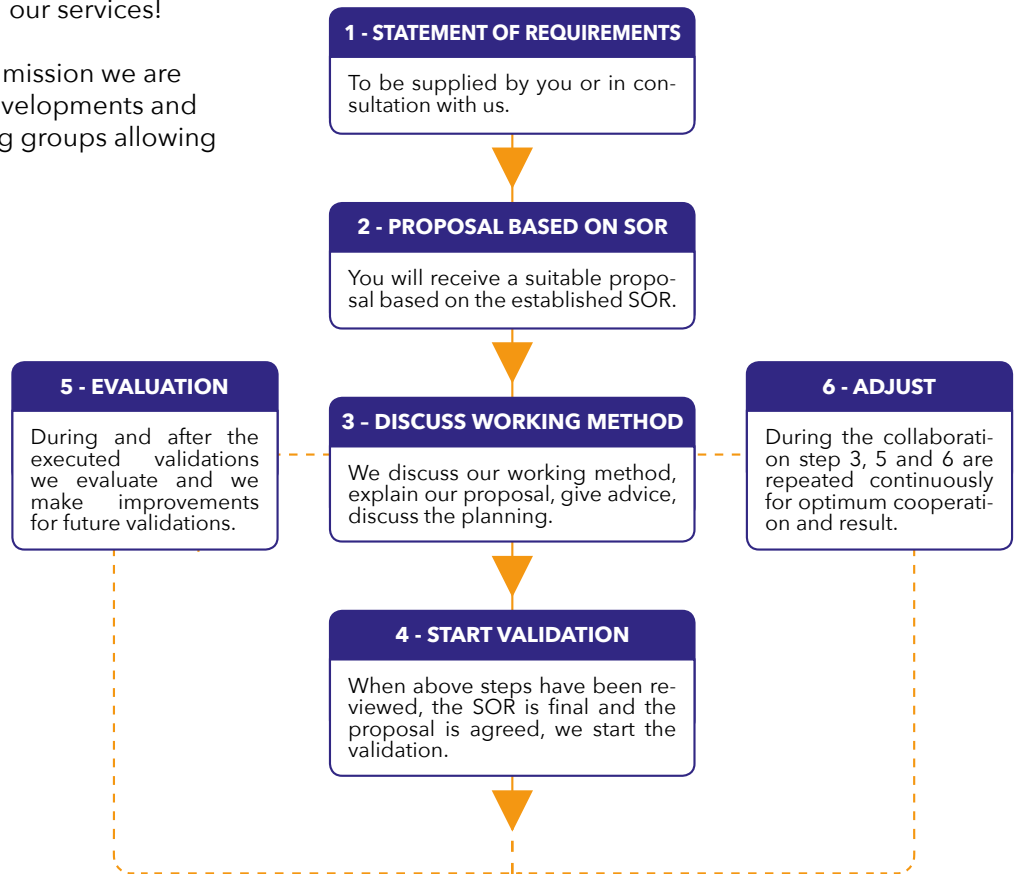

We are independent and able to work with all known brands and types of equipment. Validoss like to work globally, so wherever you are located, we are glad to offer you our services!

Being a member of the ISO commission we are constantly aware of the latest developments and we actively participate in working groups allowing Validoss to advise you properly.

**Working method**

Validoss approaches validation pragmatic with the aim to cause minimum interference with the production process. As we try to minimize the validation time as much as possible, without compromising on compliance and accuracy, the initial results of the validation are available quickly. Validoss will advise the responsible person at the customer on realising the equipment for use after a validation.

The applicable standards such as EN ISO15883, EN285, ISO17665 and ISO16442 are the basis for any validation, next to which we will adapt, when applicable and necessary, to national guidelines and specific customer requests.

## Equipment and partners

Validoss works with the most advanced and modern equipment and software.

Where possible we measure with wireless loggers. These loggers offer the possibility to measure different parameters without pre- or post calibration and give the results wireless and with realtime streaming.

We work mainly with Simicon GmbH for measurements and analysis of cleaning-, disinfection- and sterilization efficacy. Due to our close collaboration with accredited laboratories in the Netherlands and Germany we are able to do a wide range of microbiological testing.

### Validoss specializes in validation of the following equipment:

#### Sterilizers

- Steam
- Plasma

#### Thermal cleaning and disinfection equipment

- Instrument washing machines, batch and washers
- Bedpan washers

#### Chemo-thermal cleaning and disinfection equipment

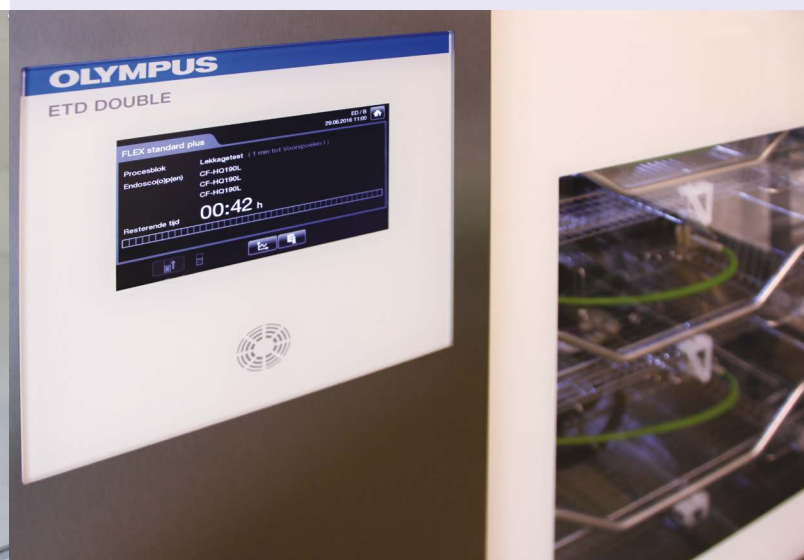

- Endoscope disinfectors
  - All brands and types of machines
  - Specialist with more than 15 years of experience
  - Full validation according to EN ISO standards and guidelines (depending on the country)
- Carts washing machines

#### Drying or storage cabinets for flexible Endoscopes

- Parametric and microbiological

#### Miscellaneous

- Sealing equipment
- Test systems

“Our requirements and expectations are fulfilled,  
which results in a pleasant and accessible contact,  
flexibility and practical validations.”

*IJsselland Hospital, Infection Prevention*

“A reliable partner in the field of validation.  
The validation experts are competent and knowledgeable  
and contribute to solutions to enable us working  
safe and patient focused.”

*OLVG, Infection Prevention*

“Flexible and committed to ensure the validations cause  
minimal interference with the production process.”

*Jeroen Bosch Hospital, Infection Prevention*
