ABOUT ENDOSS B.V.	25
OUR SALES PARTNERS	25

PRODUCT INNOVATION

Designing and developing products is an important part of ENDOSS. By listening carefully to the users of our products, we strive to continuously improve them. Equally important are the new ideas that emerge from conversations we and our distributors have in hospitals and clinics.

2Catch Polyp Trap
in development

Tip Protector
in development

ENDOSCOPY

Endoss develops, designs, and distributes medical disposables. We are committed to improve patient safety and infection prevention. We do this by offering products for CSSD and Endoscopy, our fields of expertise and focus.

Patient safety: that is what our goal is. We strive to improve the safety of the patient and take it to the next level. For this reason most of our disposable products are sterilised en packed separately in user friendly packings. All our products are labeled in accordance with the MDR, or other applicable standards like FDA. Each packing is provided with a GS1 barcode or datamatrix (UDI).

IRRIGATION TUBE SET

Endoss has disposable irrigation tube sets available for different types of brands flushing pumps. In order to prevent micro-organism to get in contact with the sterile water, a filter is placed in the cap. Research has shown that after 24 hour the water is still bacteria free.

Other advantages of this product are:

- Disposable (24 hour)
- Universal cap
- Suitable for the most familiar flushing pumps
- Filter in the cap, sterile water remains sterile
- Back-flow valve in the connector

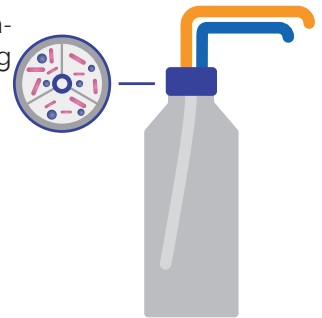

Disposable (24h) irrigation tube set
For Erbe and Olympus flushing pumps

ART.NR. 30081
VE 4x10

RINSE AND INSUFFLATION TUBING

Besides irrigation tube sets Endoss has disposable rinse and insufflation tube sets. Suitable for the most well-known brands endoscopes and CO2 insufflators. With an long extension for the CO2 it is no longer necessary to purchase a separate CO2 tube.

Other advantages of this product:

- Disposable (24 hour)
- Universal cap
- Suitable for the most well-known brands endoscopes and CO2 insufflators
- Filter in the cap, sterile water remains sterile
- Back-flow valve in the CO2 tube
- Standard for Olympus, systems for other brands available upon request

Disposable (24h) rinse and insufflation tubing
 For Olympus with filter in the cap and long CO2 extension

ART.NR. 30096
 VE 4x10

VALVES FOR FLEXIBLE ENDOSCOPY

Reusable valves for endoscopes require a difficult and precise cleaning procedure that needs to be followed according to the manufacturer’s instructions. With our single use valves manually cleaning becomes unnecessary. The single use valves contribute to the patient safety and ensure an optimized infection prevention.

Features:

- Available as sets but also as separate products
- Less effort for the CSSD employers
- Increase patient safety
- Available for all well-known brands endoscopes

Single use valve set

With suction, air/water, biopsy Valve & auxiliary water connector
Suitable for Olympus endoscopes

VE 1x100

CLEANING

Endoss offers various solutions for a solid pre cleaning of flexible endoscopes. We offer brushes for the pre cleaning of the channels of flexible endoscopes.

Over the 10 years Endoss has sold their brushes throughout Europe. In this period we produced and delivered millions of brushes. We have a wide range of brushes for all types and brands of endoscopes.

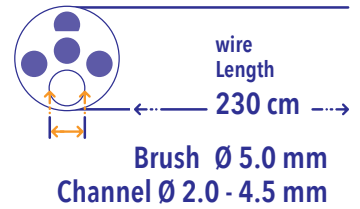

SINGLE AND DOUBLE BRUSH

Various methods and endoscopes require different types of brushes. The Single and the Double Brush are brushes that can be used for the pre cleaning of the channels of the endoscopes. The Single Brush can be pushed in and pulled back. The Double Brush can be inserted in the channel of the endoscope and pulled through the whole channel.

Brushes can be custom made if your desired type is not in our product range.

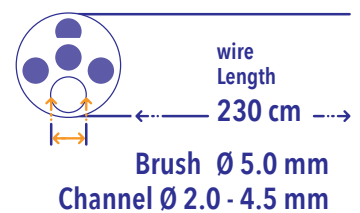

Features:

- 5mm diameter brush
- User friendly
- Suitable for pull through and pulling back the brush

Single Brush L230cm
